

CA arcserve^(R) Unified Data Protection At-a-Glance

OVERVIEW

CA arcserve UDP is based on a next generation unified architecture for both virtual and physical environments. Its unmatched breadth, ease of use, and recovery assurance capabilities set it apart from other data protection solutions.

CORE FEATURES

CA arcserve UDP is a new arcserve solution yet built on the foundation of very mature and proven arcserve technology.

CA arcserve UDP helps organizations deliver on Recovery Time and Recovery Point Objectives (RTO and RPO) while helping to optimize their resources.

It delivers a high level of flexibility to design a data protection strategy that fits unique needs, unifying data protection technologies in one solution.

This unified solution offers innovative features such as:

- Unified management console for all data protection needs
- True global deduplication
- Very flexible yet powerful data protection and availability plans
- Agentless backup for VMware & Hyper-V (Windows & Linux VMs)
- Support for physical systems (Windows & Linux)
- Built-in replication & high availability
- Migration of disk images to tape, with granular restore from disk or tape
- On-premise or in the cloud

CA arcserve UDP allows users to easily scale their hybrid business continuity topologies, locally or over long distances with multiple sites, including service and cloud providers.

ARCSERVE UDP EDITIONS

CA arcserve UDP offers 5 different packaging options for customers to meet their specific requirements and use cases.

1. arcserve UDP standard edition provides imaging functionality for Windows and Linux servers, whether virtual or physical, by creating block-based images of their volumes. Those image-based recovery points are able to be stored locally or on a centralized Recovery Point Server (RPS) where source-based deduplication is offered. There is the option to have a remote RPS that can be located in a cloud location or in a remote network operations center where multiple downstream RPS devices can replicate their data to a single upstream RPS. A centralized management console consolidates all of the above functionality into plans organizing multiple tasks and schedules. The ability to store those recovery points to tape is offered. Standard Edition does not offer application support for Microsoft Exchange or Microsoft SQL Server.

2. CA arcserve UDP advanced edition All the functionality of the Standard Edition is offered while adding the application support for Microsoft SQL and Microsoft Exchange (including granular recovery of a single email).

3. CA arcserve UDP premium edition All of the agents and options that have previously been sold as stand-alone components to CA arcserve^(R) Backup are included in this product, in addition to all the functionality contained in CA arcserve UDP Advanced Edition. Additionally, file-only replication is also offered to replicate recovery points and files from one location to another.

4. CA arcserve UDP premium plus edition Everything that is included in the Premium Edition is here plus all of the functionality that has traditionally been included in the stand-alone arcserve replication and high availability offerings.

5. CA arcserve UDP workstation edition Everything included in the Standard Edition is here except that this edition works on workstations only. The workstation edition also offers application support for Microsoft SQL Server.

CA arcserve UDP editions can be licensed per socket or per-TB except for arcserve UDP workstation edition which is licensed per workstation and sold in packs. We also offer “Socket Essentials”, a special version of “socket edition” **with very competitive prices targeted towards the SMB**

customers with VMware vSphere Essentials Kits (vSphere Essentials Kit & vSphere Essentials Plus Kit) and Windows SBS or Essentials servers. Customers can purchase up to 6 socket essentials licenses after which they need to purchase regular socket editions to protect the additional sockets.

HOW TO CREATE THE RIGTH SKU NUMBER

STEP 1: Select the appropriate base product SKU or maintenance renewal SKU

STEP 2: Add one of these 2-digit maintenance codes to complete your SKU

CA Enterprise Maintenance Codes	For Product SKUs (New, Upgrades, Comp Upgrades)		For Maintenance Renewals	
	1 Year	3 Years	1 Year	3 Years
CA Open License Program (OLP)	C4	C6	CG	CJ
CA Government License Program (GLP)	G4	G6	GG	GJ

See Side 2 for Important Product SKU Information
