Smallest Snap-On technology, cinema at its most!

Smallest Snap-On technology, cinema at its most!

The super-small and lightweight projector enables projections on indoor and outdoor surfaces. With a projection-distance of up to 3 meters, it is the smallest and most efficient device of its categorie.

The projector is just a tiny bit bigger as an iPhone 4/4S and therefore allows „in-between" cinema experiences during journeys, at friends` or at home. Just simply plug your iPhone 4/4S on the dock-connector and you´re ready to start. The devices synchronize automatically.

Your photos and movies, blockbuster or YouTube-videos can be played anytime and everywhere. With a play time of more than 2 hours, the movies can be played uninterruptibly - the only thing you need is a free surface.

- Projects 50 inch-pictures and videos from your iPhone 4/ 4S onto the nearest surface with a resolution of 640x360 pixel
- High-quality performance and brightness thanks to 15-lumen-LED projection
- Aspect Ratio: 16:9, 15 lumen
- Projection distance: 48.0 cm to 3.0 m
- Integrated Li-polymer battery with charging function (2100mAh) for iPhone 4 / 4S
- Offers up to 3 hours play time
- Integrated 0.5 watt speaker for perfect sound
- Integrated focus wheel and volume control - buttons
- Provides additional charging function via USB
- Charging time: approx. 4 hours
- Incl. power supply (5V / 2A) and USB cable
- Size: 12.7cm x 6.3cm x 2.2cm
- Weight: 105g

Package content:
DIGITUS iPhone® BeamJack™
